

## UNDER CONSTRUCTION

PROJECT UPDATE: February 18, 2009

Next week (February 23 - 27, 2009) weather permitting our general contractor, E. Allen Reeves, will be on campus preparing for the construction project.

### What we can expect:

- Gilmore & Associates, civil engineers, will be surveying the campus and marking trees to be removed.
- Cornell, excavating contractor, will be installing erosion control fencing and putting in construction entrances, two on Lower State Road (at the lower parking lot and entrance to the Club House); one on Memorial Drive (between the main entrance and Lower State Road). This may happen later in the week or the following week.
- Because of the large stone to be used at the construction entrances, especially the one at the lower parking area, passenger vehicles will not be permitted. The rough surface and sharp stones may cause flat tires.
- All employees who usually park in the lower parking lot must now park in the upper lot down by the Teen Center for the duration of the construction project. This is essential and for all employees to park in this area as well. Thanks for your cooperation.
- If you have any questions or comments, please let us know. Operational questions can be directed to Ro Molyneux and project questions to Gene Smith.
- Frequent updates will follow as the project moves forward.
- Your patience and understanding are appreciated.
